DETAILED ACTION

Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-35, 46-50, 56-66 and 69-71, drawn to validating/verifying a ticket using virtual machine, classified in class 235, subclass 462.15.
 - II. Claims 36-45 and 51-55, drawn to encoding a bar code, classified in class 235, subclass 494.
 - III. Claims 67 and 68, drawn to reading a radio frequency identification tag, classified in class 235, subclass 492.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the validating/verifying method as claimed in Group I does not require the specific instruction encoding method as claimed in Group II. The barcode can be encoded with a universal product code, which is not necessarily an instruction, and the instructional barcode as claimed does not necessarily require a virtual machine for processing. The subcombination has separate utility such as encoding instructions for changing the barcode reader settings, or

Art Unit: 2876

encoding product descriptive codes, which are separate from validating/verifying a ticket for game of chance.

- 3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
- 4. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.
- 5. Inventions I and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because Group I describes reading a bar code which is not necessary in the method claims of Group II, which describe the method for reading a radio frequency identification tag. The subcombination has separate utility such as reading radio frequency tracking tags for moving vehicles or animals to locate the position.
- 6. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Application/Control Number: 10/698,152

Art Unit: 2876

7. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group III, restriction for examination purposes as indicated is proper.

Page 4

- 8. Inventions II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention of Group II has separate utility such as encoding codes for changing the setting of a barcode reader. Because Group II describes encoding particularly a barcode and Group III relating to a radio frequency identification tag, the method of reading a radio frequency identification tag of Group III is not required for reading the instruction encoded barcode. See MPEP § 806.05(d).
- 9. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
- 10. Because these inventions are distinct for the reasons given above and the search required for Group II is not required for Group III, restriction for examination purposes as indicated is proper.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kumiko C. Koyama whose telephone number is 571-272-2394. The examiner can normally be reached on Monday-Friday 8am-4:30pm.

Art Unit: 2876

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael G. Lee can be reached on 571-272-2398. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
